# INTRODUCTION

## INTRODUCTION

The information presented in this statistical report summarizes data collected during the summer months of the 1986 park operating season as part of the on-going provincial park User Survey Program. This program was established in 1974 to provide current information for a variety of planning, research and operational/management functions. The program operates on a six year cyclical pattern during which time eligible parks are surveyed once. This approach permits a response to changing needs for user information and ensures that data for any given park are never more than six years old. The database is now sufficient to provide a reliable record of trends and patterns of park users on a provincial and regional basis.

Questions contained in the survey obtained information on the characteristics of campers including: the extent of park usage, travel data, activity participation, trip-related expenditures, marketing information and park perception. In addition, a number of park-specific questions were added to investigate particular issues of concern of the park manager (see Appendix for copy of Questionnaire).

If further information for a specific table or park is required, please contact the Parks and Recreational Areas Branch, Research and Computer Application Unit.

A total of 5748 questionnaires were processed and form the basis for the sample of park campers in the 24 parks surveyed. The following table indicates the sample size for each park surveyed.

| PARK | SAMPLE SIZE |

* Because of the small sample size at these parks, caution must be exercised in interpreting the survey results for these parks. Basically the smaller sample means we cannot be as confident of the specific values obtained. Contact Parks and Recreational Areas Branch, Research and Computer Applications Unit for further information.
